Website Review: SSIB Infra Builders

https://ssib-cb668.web.app | Reviewed 5 Nov 2026

Important note on scope

My tool could read only the page's **head** (title, description, theme colour, viewport). The visible page — layout, images, text, buttons, forms — did not come through, so **design, colours in use, content, speed and mobile layout are NOT reviewed here**. The custom domain ssibinfrafbuilderspvtltd.com blocks automated access, so I could not confirm it opens the same site. Send screenshots (mobile + desktop) or the page source and I will review those parts properly.

1. What was checked

Item	Finding	Status
Title	“SSIB Infra Builders Pvt Ltd — Trusted name in construction” — 58 characters. Clear, includes brand name.	Good
Meta description	186 characters. Covers services, Ernakulam, Kerala, since 2005. Google usually cuts around 155–160, so the ending (“…across Kerala since 2005”) may be cut off.	Shorten
Theme colour	#090a0c (near-black). Suggests a dark theme. Browser bar on mobile will be dark.	Info
Viewport	width=device-width, initial-scale=1 — present, needed for mobile.	Good
Page body	Not returned to my tool. Could be loaded by JavaScript. If so, WhatsApp/Google previews and some search crawlers may see an empty page.	Verify

2. What to do (priority order)

#	Action	Why
1	Connect ssibinfrafbuilderspvtltd.com to Firebase Hosting (Hosting → Add custom domain) and confirm it opens the site over https. Then keep the QR code on that domain.	The QR code I made points to the .com. If it is not connected, scanning shows an error.
2	Shorten the meta description to about 150 characters, e.g. “Road tarring (BM & BC), earth work, rock cutting, paving tiles and bitumen mix plants across Kerala. SSIB Infra Builders, Ernakulam.”	Full text shows in Google results.
3	Add Open Graph tags (og:title, og:description, og:image 1200×630) and a favicon/logo.	Controls how the link looks when shared on WhatsApp/Facebook.
4	Add a canonical link and submit the site in Google Search Console (sitemap.xml + robots.txt).	Helps Google index the right address, not the web.app duplicate.
5	Add LocalBusiness structured data (name, address, phone, area served) and create a Google Business Profile.	Shows up for “road contractor near me” searches in Kerala.
6	Make sure key text (services, contact) is in the HTML, not only drawn by JavaScript.	Better SEO and link previews.

3. Colour theme

The dark theme-colour (#090a0c) fits a heavy-construction brand: serious and strong. Whether it is the right choice depends on the actual page, which I could not see. A palette that usually works well for this industry:

Charcoal #14161A Background / header	**Safety amber** #F5B301 Buttons, highlights, icons	**White** #FFFFFF Body text on dark	**Steel grey** #9AA0A6 Secondary text, borders	**Slate** #2E3238 Cards, sections

Rules to check on the live page: body text must be white or very light on dark (never dark grey on black); use amber only for calls-to-action, not for large text blocks; keep one accent colour only; check readability on a phone in sunlight; real project photos matter more than any colour choice.

4. Checklist to confirm on the live page

Check	Done?
Phone number tappable (tel: link) and WhatsApp button visible without scrolling	[ ]
Address, email, GST/registration details in footer; Google Maps link	[ ]
Services section: BM & BC tarring, earth work, rock cutting, paving tiles, buildings, bitumen mix plants	[ ]
Real project photos, compressed (under 300 KB each), with alt text	[ ]
Contact/enquiry form works and sends to your email	[ ]
Looks right on a small Android phone; no sideways scrolling	[ ]
Loads in under 3 seconds on mobile data (test: pagespeed.web.dev)	[ ]
Clients / completed works / licences section for trust	[ ]
Spelling of company name consistent everywhere	[ ]
